Offeror No. 03	\$1,100,000.00	34.67
Offeror No. 04	\$1,150,000.00	32.0

70% spread: $40 \times 70\% = 28.0$ points Results: 12 points spread
75% spread: $40 \times 75\% = 30.0$ points Results: 10 points spread
80% spread: $40 \times 80\% = 32.0$ points Results: 8 points spread
85% spread: $40 \times 85\% = 34.0$ points Results: 6 points spread
90% spread: $40 \times 90\% = 36.0$ points Results: 4 points spread
95% spread: $40 \times 95\% = 38.0$ points Results: 2 points spread

If the committee decided to utilize the 90% spread formula, Offeror No. 04 is only 4 points away from Offeror No. 1. The committee may feel that a 4 point difference is too close, and is unfair to the lowest price offeror. A 70% spread, or 12 point difference, may be too far spread out and may be considered unfair to the highest price offer. Especially since the prices are not too far apart on a \$1 Million project. The point spread could be very different on a \$300,000.00 project budget versus a \$30 million project budget.

After the percentage spread is agreed upon, in this case the 80% formula, the lowest offeror gets the maximum 40 points and the highest offeror gets 32 points. Everyone else in the middle will get their points scored proportionately (extrapolated). This is the scoring system which will be utilized by the ranking committee on the price category for all construction projects. The point system will vary from project to project depending on the project budget ranges, on the number of offers submitted, and on the price spread differences between all offerors.
